

NEXUS™

Hi-Way

Roadworthy subsoil drainage

The heavy-duty, subsoil drainage pipe for performance where it really counts!

NEXUS™ Hi-Way

(complies with the relevant parts of Transit New Zealand specification NRB F/2)

Nexus™ Hi-Way from Iplex Pipelines is a heavy-duty, double wall polyethylene pipe combining a smooth inner wall with a corrugated outer wall. The two walls are welded together during manufacture, resulting in a high stiffness wall section with smooth-bore flow performance.

Nexus™ Hi-Way has an unpunched invert as specified in Transit NZ F2: 1989. A permanent, visible red stripe appears approximately opposite this unpunched invert.

Nexus™ Hi-Way should be laid with this red strip approximately uppermost to ensure the correct positioning of the unpunched invert.

Nexus™ Hi-Way is available in 110mm, 160mm and 200mm O.D. sizes. Each coil or length has a factory fitted coupling, for easy and reliable jointing.

Nexus™ Hi-Way is fully compatible with the range of **Iplex Novaflo™** fittings.

Nexus™ Hi-Way is manufactured to conform with the 'Class 500' stiffness requirement of Transit NZ specification NRB F/2: 1989.

Applications for **Nexus™ Hi-Way** include:

- Subsoil drains under roads, constructed in accordance with Transit NZ Specification NRB F/2: 1989
- Construction work-site drainage
- Subsoil drainage under carriageways or driveways
- Drainage of rubbish tips and public land fill sites
- Can be joined to **Iplex Novaflo™** or **Nexus™ Novaflo™** for mixed heavy / light-duty subsoil drainage needs

Installation

NEXUS™ HI-WAY should be installed in accordance with Transit NZ Specification NRB F/2: 1989

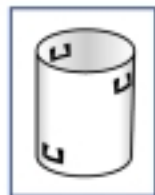

Specifications

Nominal Size (OD) mm	Standard effective length	Product Code
110mm	5m lengths 100m coils	NEXUS1105HD NEXUS110100HD
160mm	5m lengths 45m coils	NEXUS1605HD NEXUS16045HD
200mm	5m lengths	NEXUS2005HD

New Patented Coupling

Available for 110mm size

- Rigid PVC body
- Large locking teeth give excellent joint security
- Centre register to correctly locate pipes
- Easy to install
